

Flat-Top Electric Lift Operating Table

MVE operating tables are available in both flat top and V top configurations. The entire units are constructed from high grade stainless steel to ensure life long durability. Both variations are able to have their tops tilted beyond 60 degrees with a slight turn of the locking handle. The locking handle will then ensure that the top remains firmly secured in the desired position throughout any procedure.

The electric lift column provides effortless and silent adjustment through its considerable range, and will handle weights up to 150 kg. It is easily controlled with a foot pedal, which can be moved to any convenient position.

The flat top unit is recessed to retain fluids, and has a hole for drainage at one end. It is fitted with tie down rails, and comes with four cam cleats which can be positioned where desired. The cleats will handle a range of ties from 2 to 8 mm diameter cord.

Adjustable IV poles to attach to the tie rail are available as an optional extra.

Dimensions:

Top: 1500mm x 600mm

Height: Adjustable from 825mm to 1100 mm +
